Profile

After more than 2 years of web development in France, I'm looking for a job in the Netherlands. I'm always eager to learn how to make my work better, easier and more interesting. The quality and the clarity of my code is one of the most important things to me. Development is also about sharing and improving constantly and other developers should understand my code easily. Professional but easy-going, I'm not afraid to take initiative and work until a problem is solved.

Experience

Front-end web developer, Saegus   Apr 2018 - May 2019

Fruitful collaboration with designers (UX, UI, graphist...) and data scientists. Development from scratch of several web applications for CAC40 companies (biggest french companies) : L'Oréal, Engie, Orange, TechnipFMC... Full project management including direct discussion with clients, costs estimation and development.

Fullstack web developer, Monsieur Biz   Sep 2016 - Mar 2018

Maintainance and development of various e-commerce websites. Development from scratch of an e-commerce website with agile methodology. On my own, creation of 2 Symfony web applications (for internal use & for a client). Attendance to several web-related events (Symfony Live, PHP Forum, meetups...).
